C --- FUNCTION: NOT ESSENTIAL FOR B12 TRANSPORT; HOWEVER, IT IS AN AUXILIARY COMPONENT OF THE TRANSPORT SYSTEM.
C --- SUBCELLULAR LOCATION: Periplasmic (Probable).
C --- SIMILARITY: BELONGS TO THE GLUTATHIONE PEROXIDASE FAMILY.

I. CATALYITIC ACTIVITY: ATP + pyruvate = ADP + phosphoenolpyruvate.
I- PACHWAY: Glycolysis; final step.
I- SUBUNIT: HOMOTETRAMER (BY SIMILARITY).
I- SIMILARITY: BELONGS TO THE PYRUVATE KINASE FAMILY.
I- SIMILARITY: PELONGS TO THE PYRUVATE MINASE FAMILY.

-- SUBCELLULAR LOCATION: Integral membrane protein (Probable).
--- SUBCELLULAR Bacitracin is thought to be involved in inhibition of peptidoglycan synthesis by sequestering undecaprenyl diphosphate reducing the pool of lipid carrier available.
--- SIMILARITY: BELONGS TO THE UPR FAMILY.
                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (FEB-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Probably phosphorylates undecaperent to phosphate. Confers: resistance to bacitracin (By similarity).
-!- CATALKTIC ACTIVITY: ATP + undecaprent = ADP + undecaprent)
                                                                                                                                                                                                                                                                                                         15-JUN-2002 (Rel. 41, Created)

```
New nucleic acid molecules encoding polypeptides with RNA-directed RNA polymerase enzymatic activity, useful in modulating gene expression in plants, humans and animals, as well as in plant cell/tissue cultures or plant breeding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a cDNA encoding tomato C-protein having RNA-directed RNA polymerase (RARP) activity. This protein is capable of RNA-directed RNA synthesis, thus using RNA as template for synthesising complementary RNA molecules. RARP nucleic acid is useful for modulating gene expression in plants, humans and animals. This may lead to various physiological, developmental and/or morphological changes. Transgenic plants containing RARP nucleic acid is especially useful in plant cell or tissue cultures and in plant breeding. RARP is caused by the undesirable expression or overexpression of a gene.

This sequence represents a cDNA encoding the tomato RNA-directed RNA polymerase (RdRP) protein of the invention. The invention comprises the nucleic acid and protein sequences of RdRP. The protein of the invention can catalyse in vitro transcription of short single stranded RNAs into can catalyse in vitro transcription of short single stranded RNAs into DNA molecules, this transcription can be either primed by RNA or DNA oligonuclectides or be unprimed. The protein may have cytostatic or virucide activities. The sequences of the invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RdRP CDNA sequence and a template nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule in human fraction molecule farived from a nucleic acid and for inhibiting expression of any desired gene by transferring the system can be used in the preparation of a pharmaceutical composition and for inhibiting express their own RdRP. An antibody or an antagonist or inhibitor to the protein are useful for inhibiting RNA directed RNA control of gene expression, as primers for amplification of nucleic acid molecules and as tools for the detection of expression of nucleic acid molecules and as tools for the detection of expression of undesired gene expression in humans and animals and protein sequences are useful for inhumans and animals and the antibody is useful for inhumans and animals and the antibody is useful for inhumans and animals and the antibody is useful for immunoprecipitation or immunolocalisation of the protein, identification in inhumans and enhanced and the antibody is useful for immunoprecipitation or infancting with it and screening expression libraries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals

This sequence represents a cDNA encoding the tomato RNA-directed RNA colymerase (RdRP/HF) of the invention. The invention comprises the nucleic acid and protein sequences of RdRP. The protein of the invention can catalyse in vitro transcription of short single stranded RNAs into can catalyse in vitro transcription can be either primed by RNA or DNA oligonucleotides or be unprimed. The protein may have cytostatic or virucide activities. The sequences of the invention may be used in gene therapy or as an RNA directed RNA synthesis inhibitor. The RdRP cDNA sequence and a template nucleic acid molecule derived from a nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule which causes a disease are useful for treating a disease caused by the undesired expression or overexpression of a nucleic acid molecule in a human, rat or mouse, by administering the molecules. This system can be used in the preparation of a pharmaceutical composition and for inhibiting expression of any desired gene by transferring the system to organisms that either lack a comparable mechanism or do not sufficiently express their own RdRP. An antibody or an antagonist or inhibitor to the protein are useful for inhibiting RNA directed RNA synthesis and for ensuring stable heterologues, gene expression in transgenic organisms. The sequence is useful for probes and/or for the control of gene expression, as primers for amplification of nucleic acid molecules and as thorapeutic agent for the control of senera and virus control of gene expression in humans and animals and protein sequences are useful for infection in humans and animals and the animody is useful for infection in humans and animals and the animody is useful for infection in humans and animals and animals and protein sequence shown in the specification but was created by the indexer from the wild type RdRP sequence shown in the specification and the protein sequence is not shown in the
                                                                                                                                                                New nucleic acid molecule encoding a polypeptide having the enzymatic activity of RNA-directed RNA polymerase, for modulating gene expression and treating cancer and virus infection in human and animals \phantom{a}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is one of a number of cDNA molecules which encode plant RNA-directed RNA polymerase proteins. The sequences are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired
                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RNA-directed RNA polymerase useful providing mechanisms to engineer

The sequences are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired

The sequences are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired phenotypes.
                                                                              ö

The present sequence encodes a plant SGS2 polypeptide. SGS2 is an RNA-dependent RNA polymerase and is involved in transgene silencing. Inactivation of SGS2 is used to increase transgene stability and expression in plants, particularly crop plants, especially maize, corn, barley, sorghum, soya, sugar cane, beet, tobacco or cotton plants. Overexpression of SGS2 can be used to increase resistance to viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A new plant SGS2 gene involved in encoding an RNA-dependent RNA polymerase and in transgene silencing, increases transgene stability and expression in transgenic plants when it is inactivated -

                                                                                                                                                                                                                                                                                                                      The present sequence is one of a number of cDNA molecules which encode plant RNA-directed RNA polymerase proteins. The sequences are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired phenotypes.
                                                                                                                                                                                                                ö

                   The present sequence is one of a number of cDNA molecules which encode plant RNA-directed RNA polymerase proteins. The sequences are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired phenotypes.
                                                                                                                                                                                                                                                                                         1729

The sequences are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ΰ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence encodes a plant SGS2 polypeptide. SGS2 is an RNA-dependent RNA polymerase and is involved in transgene silencing. Inactivation of SGS2 is used to increase transgene stability and expression in plants, particularly crop plants, especially maize, corn, barley, sorghum, soya, sugar cane, beet, tobacco or cotton plants. Overexpression of SGS2 can be used to increase resistance to viral infection in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1658

The present sequence describes a purified corn tassel-derived polynucleotide sequence (cdps) comprising a nucleic acid sequence colynucleotide sequence (cdps) comprising a nucleic acid sequence selected from those given in ABL/10627 to ABL/6833. The cdps sequences cencede corn tassel-derived polypeptides (CDPs). The cdps sequences (can be used for determining altered gene expression, to recover regulatory elements and to follow inharitance of desirable characteristics through hybrid breeding programs. (I) are also useful characteristics through hybrid breeding programs. (I) are also useful in the evaluation, and alteration of desired characteristics associated with growth and development, disease resistance, environmental adaptability, quality and yield, and as molecular markers for studying inheritance of multigene traits in a plant breeding program. (I) can be used to produce a tassel-specific profile of gene transcription, a can be used to produce a tassel-specific profile of gene transcription, a lemantes, in nucleic acid sequences from DNA increases a polypeptide, to identify, isolate or extend infanties, in nucleic acid hybridisation or amplification technologies, as query sequences to determine hybridisation, and to identify the for use in Southern or Northern hybridisation, and to identify the presence of and/or to determine the degree of similarity between two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    determining altered gene expression, to recover regulatory elements and to follow inheritance of desirable characteristics through hybrid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence describes a purified corn tassel-derived polynucleotide sequence (days) comprising a nucleic acid sequence control tassel-derived polypeptides (DDE). The cops sequences encode corn tassel-derived polypeptides (DDE). The cops sequences can be used for determining altered gene expression, to recover required to through hybrid breeding programs. (I) are also useful characteristics through hybrid breeding programs. (I) are also useful in the evaluation, and alteration of desired characteristics associated with growth and development, disease resistance, environmental adaptability, quality and yield, and as molecular markers for studying inheritance of multigene traits in a plant breeding program. (I) can be used to produce a tassel-specific profile of gene transcription, a transcript image, to chome regulatory elements for use in transformation vectors, to express a polypeptide, to identify, isolate or extend identical or related corn tassel nucleic acid sequences from DNA libraries, in nucleic acid hybridisation or amplification technologies, as query sequences to determine homology of known sequences, as probe for use in Southern or Northern hybridisation, and to identify the presence of and/or to determine the degree of similarity between two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 determining altered gene expression, to recover regulatory elements and to follow inheritance of desirable characteristics through hybrid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2500 GGCTGTAAATGTTCGAGCGCTGCACCACATGGTAGATTGTGTTGTATTCCCTCAGAAAGG 2559

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Soybean; plant; RNA-directed RNA polymerase; expressed sequence tag; BST; gene mapping; gene marker; plant virus resistance; plant breeding; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is one of a number of CDNA molecules which encode plant RNA-directed RNA polymerase proteins. The sequences are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is one of a number of CDNA molecules which encode plant RNA-directed RNA polymerase proteins. The sequences are useful as probes for genetically and physically mapping genes, and as markers for traits linked to those genes. They are useful for controlling gene expression and provide mechanisms to engineer plant virus resistance. They are also useful for plant breeding to develop lines with desired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Weng Z, Sakai H, Cahoon RE, Wang J, Zhong G;

AN

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
